5. The following is an examiner's statement of reasons for allowance:

The Appellants' arguments in the Appeal Brief filed on September 1, 2005 and the Board Decision filed on October 24, 2007, have been fully considered and are found persuasive.

The prior art of record Sziklai et al. (U.S. Patent No. 6,341,287), does not teach, disclose or suggest:

A computer implemented method to track custom computer application development profiles in a data processing system comprising creating the profiles with a first database tool; gathering requirements of the profiles with a second database tool; tracking modifications of the profiles with a third database tool; allowing security and authorization users access to the profiles; and determining whether breaches in security of the data processing system has occurred in each phase of development of a computer application program, as claimed in independent claim 1.

Claims 2-7 are allowed because they are dependent on independent claim 1.

A computer system executing a method to track custom computer application development profiles in a data processing system comprising a first database tool; a second database tool connected to the first database tool; a third database tool connected to the first and second database tool; a data bank connected to the first, second and third database tool; and a security and authorization interface connected to the data processing system, wherein the first database tool comprises a first set of protocols which create the profiles; wherein the second database tool comprises a second set of protocols which gather requirements of the profiles; wherein the third database tool comprises a third set of protocols which track modifications of the profiles; and wherein the third database tool determines whether breaches in security of the data processing

system has occurred in each phase of development of a computer application program, as claimed in independent claim 8.

Claims 9-14 are allowed because they are dependent on independent claim 8.

A program storage device readable by machine, tangibly embodying a program of instructions executable by the machine to perform a method to track custom computer application development profiles in a data processing system comprising creating the profiles with a first database tool; gathering requirements of the profiles with a second database tool; tracking modifications of the profiles with a third database tool; allowing security and authorization users access to the profiles; and determining whether breaches in security of the data processing system has occurred in each phase of development of a computer application program, as claimed in independent claim 15.

Claims 16-21 are allowed because they are dependent on independent claim 15.
